

Visual Audit Analytics (VAA)

Version 1.2.1 Release Notes

Release Date: 15 July 2026

This is a **maintenance release** containing a single important bug fix. It supersedes v1.2.0, released July 13, 2026.

Bug Fix

AI Assistance

- Fixed an issue where duplicate metadata was inadvertently included in requests sent to the AI engine.
 - In some situations, this caused AI requests to exceed the configured token limit, resulting in the AI being unable to process the request.
 - The application now automatically detects and removes duplicate information before sending requests to the AI engine, reducing token usage and improving the reliability of AI-generated responses.
-

Upgrade Recommendation

All users running **v1.2.0** are encouraged to upgrade to **v1.2.1** to ensure reliable operation of the AI Assistance features.

Thank You

Thank you for supporting Visual Audit Analytics and for the valuable feedback you've provided.
